

ENSAR ASLAN

Backend Developer

ensaraslannn@gmail.com | +90 538 053 1778 | LinkedIn: ensaraslannn | GitHub: EnsarAslannn

SUMMARY

I am a Computer Engineer pursuing a career focused on Backend development. I concentrate mainly on building backend architectures with C#, .NET, and SQL technologies. At the same time, I am developing my skills in Frontend with the goal of becoming a Full Stack developer in the future. Driven by a strong belief in continuous growth and a high learning motivation, I aim to make the maximum contribution to the projects and processes of the software team I join.

EDUCATION

Computer Engineering (100% English), Karabük University	08/2020 - 08/2025
Computer Science - Erasmus+ Program, University of Bielsko-Biala	02/2023 - 06/2023

EXPERIENCE

Brisa Bridgestone Sabancı Lastik Sanayi ve Ticaret A.Ş. Intern	08/2024 - 09/2024
Participated in meetings observing enterprise software development processes in the manufacturing sector; contributed to the analysis of Agile workflows and project management methodologies.	

AZR Bilişim Eğitim Mühendislik ve Danışmanlık Intern	06/2025 - 07/2025
Actively participated in team project planning and software development processes in a remote work model.	

PROJECTS

TakeAuction — Real-Time Live Auction System

- Built a high-traffic, real-time live auction system with .NET and Vertical Slice Architecture, running on PostgreSQL.
- Implemented event-driven messaging with RabbitMQ, automatic lot closing with Hangfire, and real-time bid notifications with SignalR.
- Implemented JWT-based authentication; the project, tested with xUnit, Testcontainers and Playwright, was integrated into a CI/CD pipeline via Docker and GitHub Actions.

AltitudELog — Flight & Crew Management System

- Developed a system enabling pilots to log flights and assign crew members, following Clean Architecture and CQRS (MediatR) principles (.NET, PostgreSQL).
- Integrated automatic weather data retrieval from an external service through background jobs with Hangfire; implemented caching with Redis.
- Implemented role-based authorization with JWT; the project, tested with xUnit and Testcontainers, was integrated into a CI/CD pipeline via Docker and deployed to production.

DOLFIN — Financial Portfolio Management Platform

- Developed a full-stack platform enabling users to buy and sell stocks with a virtual wallet (.NET, PostgreSQL).
- Implemented secure user authentication with JWT and CSRF protection; improved performance with Redis caching.
- The project, tested with xUnit and Playwright, was integrated into a CI/CD pipeline via Docker and GitHub Actions.

SKILLS

Languages: C#, TypeScript, JavaScript, SQL | English (B2)

Web & Backend: .NET 10 / ASP.NET Core Web API, React, SignalR, RESTful API, Vite, Tailwind CSS

Tools & DevOps: Git, GitHub Actions (CI/CD), Docker, RabbitMQ, Hangfire, JWT, CSRF Protection

Testing: xUnit, Testcontainers, Playwright

Database & Architecture: PostgreSQL, Entity Framework Core, Redis, Clean Architecture, CQRS (MediatR), Vertical Slice Architecture
